

RAIL & CLAMPS (for fixing to existing posts)

When you wish to attach a Notice Board to existing posts (as per example shown), this is best achieved by specifying the **Rail & Clamps** fixing option when ordering. As you can see in the pictured example, the notice board will then come with (at least) 2 x rail attachments (fixed horizontally to the rear of the board, at the factory). Clamps are then used to secure the board to the posts by wrapping the clamps around the post and fixing to the rails on the back of the board.

IMPORTANT

Board Size

Please ensure that the width of the notice board you order overhangs the outer edge of the posts by at least 10cm each side. This allows sufficient rail overhang for the clamps to be affixed (without risk of slipping off). Alternatively, simply supply us with the centre-to-centre distance between the posts and we can recommend suitable board sizes for you.

Post size

When ordering your notice board with rails, please also supply us with the shape and size of the existing posts (ie. Round – with diameter, or Square/Oblong – with front and side measurements).

This information determines which clamps are supplied (we try to use shaped clamps (as per pics of oblong post shown) wherever possible as this provides a more secure fixing. Where shaped clamps are not possible, we supply a universal fixing clamp (strap).
