

# THE BENEFITS OF CHOOSING OUTDOOR PARK & STREET FURNITURE MADE FROM RECYCLED PLASTIC

- The main reasons why plastic waste is so bad for wildlife and the environment are also some of the key reasons why this increasingly popular manufacturing material is simply perfect for making Outdoor Street Furniture.
- Recycled Plastic furniture is usually heavier than traditional materials, longer lasting, more robust, weatherproof, resistant to insect infestation, rotproof, sustainable, doesn't splinter or split, is difficult to deface and vandalise and is almost completely maintenance free – And as an added bonus, it is not porous, so unlike wood, it doesn't retain water, so can be quickly wiped down and used after a rain shower.
- Buying furniture made from Recycled Plastic helps decrease the amount of plastic going to landfill and reduces overall demand on the world's natural resources and the need to grow, harvest or extract other raw materials!
- A typical picnic table is made from the equivalent of around 2500-3000 recycled plastic bottles or containers, saving around 90kg of carbon going to landfill (and 0.25 tree's from being cut down to make a wooden alternative).
- All Recycled Plastic Furniture can be recycled again!
- And, when purchasing Recycled Plastic Furniture from KBS Depot Ltd – we have also added to the many environmental benefits already offered, by committing to plant a new tree (via More Trees) for every customer who places an order which includes a Recycled Plastic Furniture item – So you can be confident that your purchase has helped contribute to the growth of future forests around the world.
